"HOW MATHWORKS SINS  
AND PYTHON SAVES"

ROBERT HETLAND

WED. 7PM

# Why is MATLAB™ so cool?

- High level language
- Simple, fast numerics
- Interactive or scriptable
- Flexible
- NetCDF support
- Geospatial plotting

Basic MATLAB™

User contributed

*All of these things are also true for Python...*

# What is Python?

- **Python** (core language) - High level object oriented scripting language.
- **numpy** - Numerical array objects and standard mathematical tools (e.g., eig & fft)
- **scipy** - Expanded math libraries (e.g., optimization & interpolation)
- **matplotlib** - 2D plotting based on MATLAB™

One stop shopping at [scipy.org](http://scipy.org)

# Python

# MATLAB™

## Advantages

Free/Open source

Powerfull

Obj. oriented language

Linking to other languages

Existing code

Existing knowledge

## Disadvantages

Rapid development

Non-trivial installation

\$\$\$ / Licensing

Inflexibility

## 2007 North American Pricing Changes

The MathWorks plans to make the following pricing changes in 2007 and Software Maintenance Service fee transition through 2008.

### Product License Fees

In 2007, the base initial license fees will not increase for MATLAB and most other products.

License fees for some products may change during 2007 as a result of new product introductions, major upgrades, or changes to existing products. If such changes occur, they will be communicated during the course of the year.

### Software Maintenance Service Renewal Fees

As previously announced in 2005, Software Maintenance Service (SMS) fees will transition over a multiyear period until they reach 18% of initial license fees in 2008, with the exception of SMS for most Individual license toolbox products, which will transition to 9% of initial license fees.

The following net changes to SMS renewal fees will apply, with the exception of increases or decreases resulting from any base initial license fee changes:

- SMS renewal fees for the Individual and Group License Options will increase an average of 4% across all products, effective January 1, 2007. We project that these SMS fees will also increase 4% in 2008.
- SMS renewal fees for the Concurrent License Option will increase an average of 8% across all products, effective January 1, 2007. We project that these SMS fees will also increase 8% in 2008.

### Prepaid Multiyear SMS Option

If you currently subscribe to SMS, you have the option to prepay one, two, or three years of SMS at then-current-year prices. One benefit of this option is that you will not be affected by any SMS price increases during the time period for which you have prepaid.

Please contact your sales representative if you are interested in the prepaid multiyear SMS option.

Thank you for your continued use of MathWorks products. We continue to invest revenues heavily in research and

# Comparing Python and MATLAB™

```
# python
from matplotlib.matlab import *

dt = 0.01
t = arange(0,10,dt)
nse = randn(len(t))
r = exp(-t/0.05)

cnse = conv(nse, r)*dt
cnse = cnse[:len(t)]
s = 0.1*sin(2*pi*t) + cnse

subplot(211)
plot(t,s)
subplot(212)
psd(s, 512, 1/dt)
```

```
% matlab
% no import necessary

dt = 0.01;
t = [0:dt:10];
nse = randn(size(t));
r = exp(-t/0.05);

cnse = conv(nse, r)*dt;
cnse = cnse(1:length(t));
s = 0.1*sin(2*pi*t) + cnse;

subplot(211)
plot(t,s)
subplot(212)
psd(s, 512, 1/dt)
```

(from the matplotlib users guide)

```

from numpy import *
import pylab as pl
from matplotlib.toolkits.basemap \
    import Basemap
import netCDF4

```

```

nc = netCDF4.Dataset('mrp_grd4.nc')
lon = nc.variables['lon_rho'][:, :]
lat = nc.variables['lat_rho'][:, :]
h = nc.variables['h'][:, :]
mask = nc.variables['mask_rho'][:, :]

```

```

h = ma.masked_where(mask==0, h)

```

```

m = Basemap(projection='merc', \
            lat_ts=0.0, lon_0=lon[0].mean(), \
            resolution='h', \
            urcrnrlon=-87.5, urcrnrlat=31.3, \
            llcrnrlon=-95.5, llcrnrlat=27.5)

```

```

fig = pl.figure(figsize=(8, 4))
ax = fig.add_axes([0.1, 0.05, 0.9, 0.9])

```

```

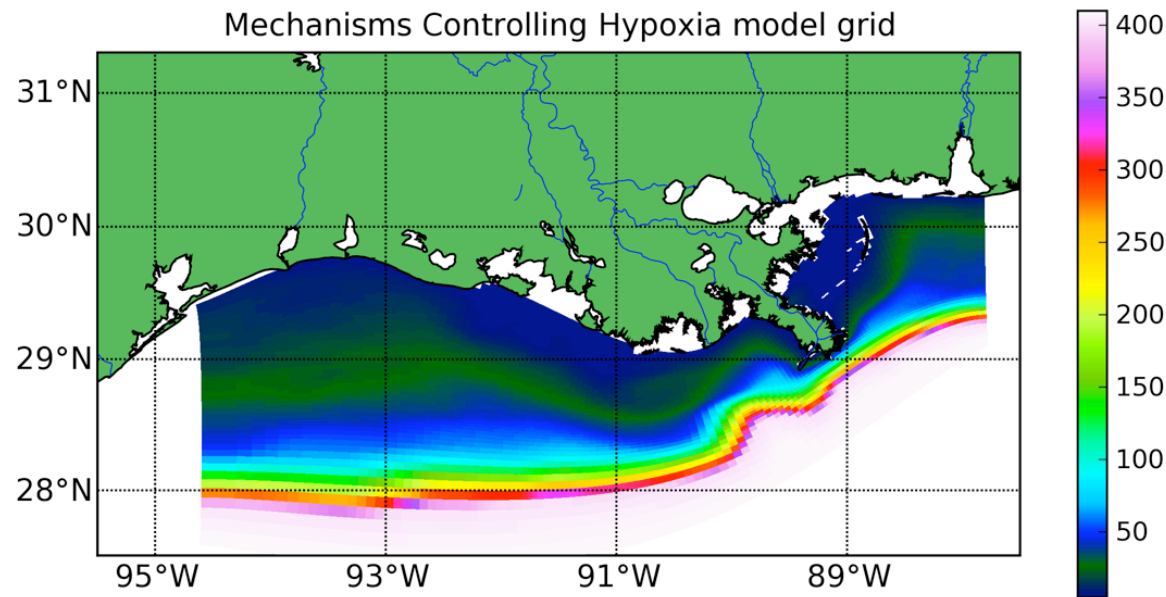

m.drawcoastlines()
m.fillcontinents(color=(0.2, 0.8, 0.2))
m.drawrivers(color='b')
m.drawparallels(arange(27.0, 32.0), labels=[1,0,0,0])
m.drawmeridians(arange(-95.0, -87.0, 2.0), labels=[0,0,0,1])

```

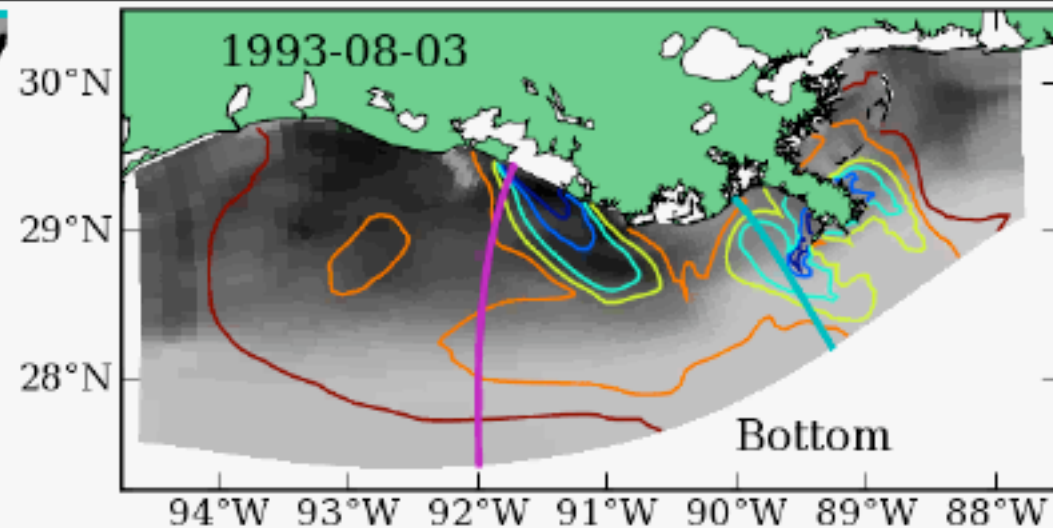

```

x, y = m(lon, lat)
pch = ax.pcolor(x, y, h, cmap=pl.cm.gist_ncar, shading='flat')
cbh = pl.colorbar(pch)
cbh.set_label('Depth (m)')
ax.set_title('Mechanisms Controlling Hypoxia model grid')
ax.axis([m.xmin, m.xmax, m.ymin, m.ymax])
pl.show()
